A user-friendly guide to adding and editing content on the IEEE Smart Village DokuWiki.

## Getting Started: Creating a New Page

**Search for your page title**: The easiest way to create a new page is to first search for the title you have in mind. If the page doesn't exist, you can create it.

**Use the search bar**: Type your desired page title into the search bar and press Enter.

**Create the page**: If the page doesn't exist, you'll see a "This topic does not exist yet" message. Click the "Create this page" button to open the editor.

## Editing an Existing Page

To edit a page you are currently viewing, look for an "Edit this page" button or link. This will open the page in the editor, allowing you to make changes.

## Basic Formatting

DokuWiki uses a simple markup language to format text. Here are some of the most common formatting options.

**Bold and Italic**:

For **bold** text, wrap it in double asterisks:

```
**text**
```

For *italic* text, wrap it in double slashes:

```
//text//
```

For **underlined** text, wrap it in double underscores:

```
__text__
```

**Headlines**: Use the equals sign = to create headlines. More equals signs create smaller headlines.

```
====== Large Heading ======

===== Medium Heading =====

==== Small Heading ====
```

**Lists**:

**Unordered Lists**: To create a bulleted list, indent your text with two spaces and use an asterisk * for each item.

**Ordered Lists**: To create a numbered list, indent your text with two spaces and use a hyphen - for each item.

## Creating Links

**Internal Links**: To link to another page within the wiki, use double square brackets.

```
[[:playground:page_name|]]
```

will create a link to "page_name".

```
[[:playground:page_name|link text]]
```

will create a link to "page_name" with the text "link text".

**External Links**: To link to an external website, simply paste the full URL.

```
[[http://www.example.com|http://www.example.com]]
```

will create a link to that URL.

```
[[http://www.example.com|link text]]
```

will create a link with custom text.

## Adding Images

**Upload the image**: Click the "Media Manager" button to upload your image file.

**Embed the image**: To embed an image into a page, use double curly braces.

```
[[:playground:image.jpg?id=playground%3Ahowto&media=playground:image.jpg|{{:playground:image.jpg|image.jpg}}]]
```

## Saving Your Work

Once you are finished editing, you will see a "Save" button. Click this to save your changes. It's a good practice to also use the "Preview" button to see how your changes will look before saving.
